

# Hachiko AI - Whitepaper

## 1. Introduction

Hachiko AI is a purpose-driven cryptocurrency project inspired by one of the most emotionally resonant true stories of our time – the unwavering loyalty of Hachiko, the dog who waited for his owner every day for nine years, even after his passing. In a world where blockchain innovation is often fueled by hype and speculation, Hachiko AI stands out by placing emotional impact and real-world change at its core. The project blends technology, storytelling, and verified charity to offer supporters a token that doesn't just sit in a wallet – it serves a higher purpose. Hachiko AI is not a get-rich-quick scheme or another passing meme; it's a symbol of consistency, emotion, and contribution through crypto.

## 2. Vision & Mission

At Hachiko AI, our mission is to align financial tools with compassion. The project is designed to create a circular ecosystem where blockchain adoption fuels real-time support for helpless animals. Our long-term vision is to build a bridge between digital value and ethical action – a platform where every transaction, trade, or token movement has a ripple effect in the real world. By leveraging smart contracts and decentralized principles, we aim to create a transparent, community-governed system that channels funds directly to dog shelters and animal rescue causes. This mission is fueled by two key values: emotional storytelling and impact-driven tokenomics. We don't want users who just invest; we want supporters who care.

## 3. Token Allocation

Hachiko AI has a fixed supply of 8,000,000,000 HACHI tokens, carefully structured to prioritize growth, community engagement, and long-term sustainability:

- 50% (4B) is allocated for the presale in 4 transparent stages
- 15% (1.2B) reserved for liquidity provisioning and CEX listings
- 10% (800M) allocated for marketing and strategic airdrops
- 10% (800M) held for team, founders, and advisors (subject to vesting)
- 5% (400M) for community rewards, contests, and giveaways
- 5% (400M) reserved in treasury for future use cases, DAO operations, and long-term partnerships

Unlike many projects that distribute vague reserves, Hachiko AI provides a visible roadmap on how each

# Hachiko AI - Whitepaper

segment will contribute to utility and transparency. Presale buyers can rest assured that they are entering an ecosystem with a clear, public-facing distribution plan.

## 4. Presale Structure

To ensure wide participation and progressive growth, the Hachiko AI presale is divided into 4 unique stages, each increasing in price by 2.5x from the previous stage. This ensures early believers are rewarded with a significantly higher token allocation while maintaining a controlled, predictable price structure. The presale avoids artificial 'hard caps' to promote organic participation. Instead, each stage ends once its target BNB equivalent is reached. The pricing structure is as follows:

- Stage 1 - \$0.0001146 (2.46 Billion tokens)
- Stage 2 - \$0.0002865 (984 Million tokens)
- Stage 3 - \$0.0007163 (393.6 Million tokens)
- Stage 4 - \$0.0017914 (157.39 Million tokens)

Token delivery is guaranteed via smart contract post-sale, and a 5% referral bonus is embedded to incentivize genuine word-of-mouth growth without influencer over-reliance.

## 5. Token Utility

HACHI is not just a passive asset its an entry into a growing ecosystem of tools, rewards, and charitable action. Its utility includes:

- Staking: Passive yield opportunities for long-term holders
- NFTs: Limited-edition collectibles tied to real rescued dogs
- Mobile App: Tools for local pet tracking, lost-and-found alerts, and rescue support
- Mini-Games: Play-to-donate systems where gameplay supports charity wallets
- Governance: DAO participation to vote on fund allocations and community expansion

Future integrations will allow token holders to interact directly with shelter services, earn badges for social impact, and contribute to real-time voting on funding needs.

# Hachiko AI - Whitepaper

HACHI will be the backbone of the Hachiko AI platform. Utility plans are designed for long-term community engagement and adoption:

- **Staking Model**: Users will be able to lock their tokens in staking pools to earn passive HACHI rewards. APY rates will vary based on staking duration.
- **NFT Ecosystem**: Hachiko NFTs will be tiered into categories based on rarity and story association (e.g., 'Rescue Hero', 'Guardian', 'Legend'). Each NFT will grant access to special features, discounts, or limited events.
- **Hachiko App (mockups in roadmap)**: An app will allow users to track donations, vote in charity decisions, and use tools like Pet Rescue Locator to assist in real-world animal support.
- **Mini-Games**: Play-to-donate games will enable users to participate in simple games where ad revenue and token interactions contribute to the charity pool.
- **Governance System**: Token holders will be able to vote on charity fund usage, feature releases, and treasury allocations once DAO infrastructure is in place (expected by mid-2026).

## 6. Charity System

At the heart of Hachiko AI is our on-chain charity engine. A fixed 1.5% fee is applied to every buy and sell these funds go directly to a publicly visible charity wallet. These funds are used for real-time shelter expenses: food, medicine, rescue, vaccination drives, and vet care. The wallet is 100% transparent, and every distribution will be accompanied by visual proof: receipts, photos, and videos via our official social handles. We plan to partner with real, registered shelters (initially in India, later globally), giving Hachiko AI a transparent and replicable donation structure that builds trust and emotional value.

## 7. Roadmap

Our journey is structured into phases, each unlocking new growth, features, and transparency for the Hachiko AI ecosystem. Unlike fixed launch-date projects, our roadmap is community-paced and milestone-based.

Q2 2025 - Smart contract audit, Stage 1 presale, hachikoai.io launch

Q3 2025 - Completion of presale stages, social campaigns begin, dog welfare stories shared weekly

Q4 2025 - Token listing (CEX or DEX if market-fit), NFT alpha preview, app demo release

2026+ - DAO activation, full mobile launch, global charity onboarding, and gamified utility tools

# Hachiko AI - Whitepaper

Each milestone is designed not just to expand the project, but to deepen impact.

## 8. Security & Transparency

Security and trust are fundamental to everything we build. Our smart contracts will undergo audits before launch. Funds raised during the presale are secured in multi-signature wallets with timed release mechanisms. Referral bonuses and token allocations are governed automatically by the presale contract to prevent human error or mismanagement. Every step from token delivery to charity spend will be visible, trackable, and community-reviewed. We are committed to transparency, not just through code, but through visible impact and open updates.

Additional security commitments include:

- Smart contract audit before any public listing
- Liquidity will be locked or vested depending on the launch model
- Use of cold wallets and multisig governance for charity funds
- Dashboard development for real-time charity fund tracking

## 9. Team & Community

Hachiko AI is a collaborative mission led by a lean team of crypto builders, storytellers, and community organizers. While some team members choose to stay semi-anonymous in early stages, their presence is actively felt through execution, deliverables, and engagement. As the project evolves, we aim to transition to a more open team structure, paired with community councils and DAO voting. The community will decide what features matter, where charity is sent, and how Hachiko AI evolves beyond just being a token into a movement.

While initial team members remain semi-anonymous for privacy and operational focus, we will reveal advisory roles and community leaders as we grow. A community-led council is in planning to represent regional shelters, user groups, and token holders. This ensures decentralization of ideas and fair growth.

Community growth will be driven by:

# Hachiko AI - Whitepaper

- Weekly contests (meme, rescue stories, NFT art)
- Referral leaderboards
- Discord & Telegram AMAs with reward incentives
- Volunteer onboarding for outreach and shelter coordination

## 10. Legal & Risk Disclosure

This whitepaper is for informational purposes only. Hachiko AI does not offer financial advice, securities, or investment guarantees. Participation is voluntary and involves market risk. Crypto markets are volatile, and there are no assurances of exchange listings, price appreciation, or utility success. Participants should consult with licensed professionals and invest only what they can afford to lose. All project components are subject to change based on regulatory, market, and technical conditions. We do not promise fixed returns or guarantees. Our only assurance: transparency, real-world impact, and a community-driven approach.

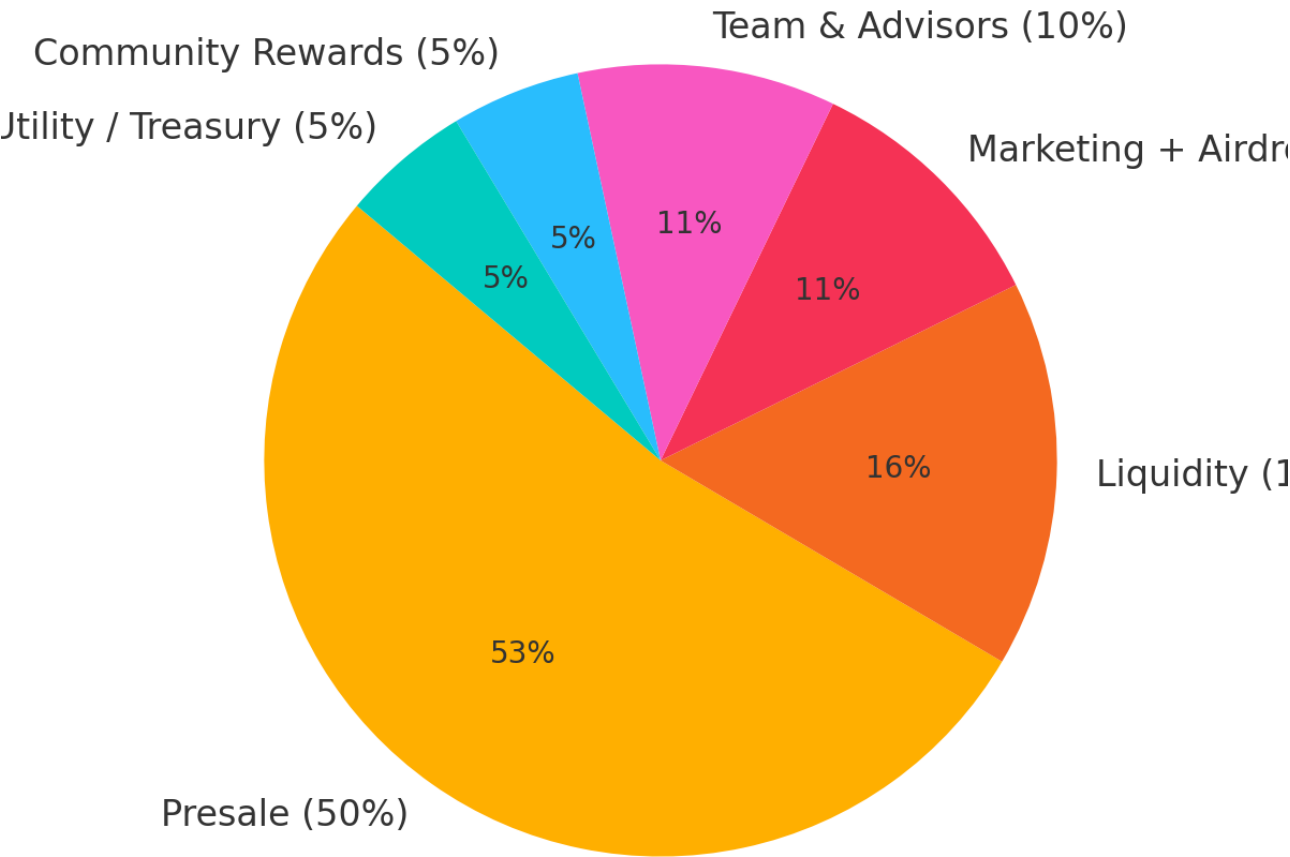

Hachiko AI maintains full flexibility in managing project lifecycle. While our intention is long-term sustainability, we reserve the right to modify, pause, or terminate features or operations in alignment with market, regulatory, or team-related changes. Any such decision will be communicated publicly, and steps will be taken to protect participant interest through clear announcements and secure token withdrawal mechanisms.

This whitepaper does not constitute a binding commitment or enforceable contract. All contributors, supporters, and investors must assess their own risk before engaging.

## Roadmap Timeline

- Q2 2025 - Smart Contract, Stage 1 Presale, Website Live
- Q3 2025 - Complete Presale, Social Campaigns, Charity Videos
- Q4 2025 - CEX Listing (if feasible), NFT Alpha, App Reveal
- 2026+ - DAO Launch, Utility Rollouts, Global Expansion
